Company Profile :

Noovosoft is a growing software development firm that has a team of dedicated professionals. We have a culture where teams directly work with international teams/startups and IIoT based projects. To ensure the delivery of world-class products/services to our clients we always focus on quality. For employees, software development skills are nurtured with the challenge to provide the best solution. Working at Noovosoft, we never think about the technology but thrive to excel as a unit to deliver the best to both the business as a client and the employee as developer.

Interns Roles :

The goal is to give the intern a solid and practical basis of modern web-based software development.

- Modern software development tools, e.g.: Linux/Windows administration, Git, Docker, IDE
- General software development practices like clean code, software patterns and testing.
- Programming language paradigms using high level languages like Java/Kotlin, Python and JavaScript/TypeScript.
- Web frameworks and APIs (Application Programming Interface)
- Relational databases and data streaming platforms.
- Web based UI and data visualization frameworks.
- Each intern will first go through the common training sessions and later work on real-world applications with their mentor.
